

Which jailbreaking exemption are you supporting—

-I am supporting the exemption for smartphones/tablets

What's your background (i.e., are you a developer, hobbyist, academic, independent researcher, user, etc.)?

-I am a user as well as a hobbyist

What device do you want to ensure you have the legal authority to jailbreak?

-I would like to ensure that android devices (all manufactured models) are given the legal authority to be jail broken (rooted in androids case)

Please explain why you want to jailbreak this device. What limitations do you face if you aren't able to jailbreak it? Is there software you couldn't run, computing capabilities you wouldn't have, cool things you couldn't do, etc.?

-The reason that I rooted my devices was to bring out its full potential, I view my phone as an extension of myself. In today's world it is a little harder to be different from society and since phones are becoming more and more prevalent in the world it is only natural we want to customize them to our likings. By rooting my device I can alter the software appearance and increase some of the features such as the speeds of processor, the animation for transitions and the images that are displayed when devices boots up and loads up. Phones are like cars in a way, once it is yours you want to make it stand out and rooting has allowed us to make that possible.

Is there anything else you want to tell the Copyright Office?

-Jail breaking (rooting) is not doing any harm to devices, it is only an enhancement
