

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Oraz10 Terrano.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

I work hard for my money ...

When I pay for a product, it should be 100% mine, to do as I want.

Having even a portion of that product taken away, is equivalent to taking part of my hard earned money.

Are the manufacturers planning to cut the prices of their products to reflect what will be no longer mine ???

It's as simple as that !!!

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, A. Chaudhuri.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

The 'ownership' society notions such as the enhanced-licensing agreements now before you, threaten to reduce all consumer spending to mere renting.

Items and services that are purchased, cease to be the property of the company that manufactured/offered them, and become the property of those who make the purchase. Any and all uses, that do not constitute illegal copy and/or distribution **MUST** be allowed as fair usage, or the consumer is relegated to the status of a minion.

Companies that seeks to make money by offering, but not surrendering products to those who purchase them are guilty of fraud.

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.Ú

Ú

We run a 40acre vegetable farm. I have avoided new technology just for the reason that you have to pay 150\$ an hour for a service tech to come to the farm and tell you what's wrong. We live out in the middle of nowhere and there billing starts when they leave their shop, so right off the bat it would be a \$300 bill just to diagnose. Most of these people are not any more trained at mechanics than i am the only difference is they can work on the proprietary software. This country was built on self reliance and that's what i stand for. When i pay 60k for a tractor i should be able to diagnose and fix it, plain and simple.Ú

Ú

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Adam Lowther.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

I can't afford to buy a new car every year or so. And these days, nor can the majority of Americans, since the economic disaster of 2008. So that means I need to keep my old one going, and need to fix it myself or get after market service as the manufacturers servicing is way too expensive for an old car. I need to be able to do any work on it I choose, and NOT be restricted by the manufacturer or anyone else. It's my car, I paid a great deal of money for it, so I should be able to do what I want with it.Ú

U

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

It appears that successive administrations are all too well aware of what's happening. But instead of doing what they're elected to do, they take the side of the folks that paid to put them in place, the large corporations that have agendas to monopolize business sectors and maximize profits. That they do this at the expense of the majority of

Americans has not escaped the notice of Americans, or the authorities, but the authorities choose to do nothing. So how long is it going to be before Americans get entirely fed up with it all and start to take action themselves? We saw what happened after the 2008 economic crash, with the backlash of protests against the financial industry all around the US. That was fairly small scale and put down relatively easily. We saw it on a larger scale with the Arab spring in so many Arab countries, where people protested against the harsh regimes in place, usually US-backed regimes.

People are not animals to be herded and controlled. They're to be treated with respect, which means respecting their right to own and modify anything they please, having legally paid for it, and therefore legally owning it. But of course, Capitol Hill has set itself outside of the laws that govern the US majority, so the folks there don't care. And most are so wealthy they can buy their freedom to do what they want anyway, so again, they don't care.

But it's a certainty that if things keep going like this, despite the dumbing down of the US population, there are more and more people that see what's happening. It's doubtful they'll stand for it longer term, whether on a personal level or as a whole. So it's time the US administration started doing what it's consistently failed to do for decades, which is to act for the people - remember that statement - government of the people, for the people and by the people? Well that's the standard by which the US administration needs to be judged, and it has failed the people for many, many years, especially as those doing the governing are far from being "of the people"! This US administration can still choose to uphold the correct principles, and a small way of doing that, demonstrably, would be to reject the interference from agenda-ridden corporations and similar, and allow us all the freedom to do what we want with our own devices.

Thank you for your consideration.

Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Alanna Bodman.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

I am providing comments on behalf of myself, Andres Ortiz.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Andrew Akers.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

I currently drive a little '82 truck. All the inner workings are mechanical, and I've spent many Saturdays out in the driveway, tinkering, repairing, modifying. I have guides produced by people who have taken apart the car and put it together again, I have tools specifically adapted to the job. However, if I bought a new car, I wouldn't have access to an increasingly important area of the engine, the electronics. I wouldn't have any guides, because no one could take it apart. I wouldn't have any tools, because no one would know how to make them. Americans should have an unfettered right to repair and modify their own vehicles. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. I want to be able to tinker, without worrying about lawyers. I want to be able to modify, without having to resort to breaking the law.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Item 1. Commenter Information

I am providing comments on behalf of myself, Andrew Hogan.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Removing the ability for a person to rightfully repair a vehicle will only monopolize the industry. If I am willing to go through the effort to diagnose an issue with my car, but I am unable to fix it because the manufacturer wants to make money on the car after the purchase, where does that leave me in 20 years when they no longer care? The car is forced to be sold for scrap.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

My father is a farmer, and one of the more important lessons I've learned from him is that older= more reliable. Farmers- at least small scale ones, operate on small margins, this is why most farmers are jacks of all trades, you just cant afford to pay for an electrician, plumber, repairman, engine specialist, etc etc when you are constantly needing those services on your farm. John deere, and many others like them, have been trying and succeeding at creating a market that used to be filled by the farmers themselves. By creating digital locks they ensure a steady supply of cash as farmers must contact a company repairman to fix the very tractors they own. This sort of protectionist thinking is extremely short sighted. First you need to consider that the prices of older versions (the ones without fancy computers) is actually rising, and that sales of newer models are falling. Then factor in the lack of investment in newer technology since the demand/funding is slowly but steadily drying up. Finally look at how this is affecting the farmers themselves- a problem that they used to be able to fix by tinkering around for a few hours now takes days just waiting for someone from a company that doesn't even have an office in the same county to arrive, then diagnose the problem, then wait even longer to order parts and wait for them to arrive. In the short term this is making fields lie fallow for days at a time when harvesting season lasts only two weeks, costing the farmer even more money than the repair itself, and in the long term it is destroying the basics of a strong economic market for newer machines. The argument for removing DMCA restrictions should be more than strong enough looking at just the economic impact. That's without even considering the idea of what ownership really is if your restricted from fixing your machine yourself for the sole reason that some company wants to milk you for even more money than they got for the cost of hundreds of thousands dollar machines. And here my dad had always taught me that we were only supposed to milk dairy cows!

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Ú

As a 5th generation farmer and software engineer, this hits home to me all the time. Sometimes the companies aren't innovating quick enough for my operation, and with the skills I have gained in software engineering, I could more easily come up with my own remedies.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Copyright was designed to encourage creativity and innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, andrew Schechtman.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

It is very important that once I own something, I get to modify for my needs as I see fit. The manufacturers almost never get a device perfectly dialed-in to suit my needs. That's why I must be allowed to always take any product "the rest of the way" with customization. Don't make me a criminal over this.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Tony Loro

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Anthony Manzella.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Auggie Turchiano.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Thank you for your consideration.

Hi I am a 17 year old California born native!

I just don't understand why every year you people decide that you want to control what you don't understand so you write another bill against it's?

I don't think that's what the forefathers would of wanted.

I just want you to try and think about it from our perspective at least for once?

All you ever seem to do is change or lives for the worse or for your own personal gain!

If you ever want us for you than don't make things that go against everything that we are.

My generation is going to be you one day

Just think about that someone that's 17 now is going to be in your chair one day.

Would you take away your own freedoms?

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Benjamin Britt

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Benjamin Brown.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Benjamin Drechsel.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles. We shouldn't be left to the mercy of the manufacturer or service providers to provide affordable or timely services to equipment that's essential to my livelihood.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

I am providing comments on behalf of myself, Ben Mehling.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Bottom line, these are devices that we have bought and should have the right to do with them as we wish. If that voids the warranty, fine, we gladly accept responsibility for that. That should be the end of it though. No one should fear prosecution for modifying devices that they own.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Ben Mull.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Bill Sitkin.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Blake.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Since when was it ever illegal to repair a car? Are you kidding me? This is how children learn from their parents, and is absolutely necessary for driving. One should always be able to repair their own car. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Please consider the importance of a competent society, and not one reliant on private corporations for repair and function. It is the responsibility of every responsible American to learn to be independent and be able to repair/improve the devices we legally purchase. Corporations feel the need to nickel-and-dime individuals with unnecessary newer devices when older ones fail - many of these failures can be fixed, putting money back into the pockets of individuals who will in turn spend their money in other ways. It is important that the marketplace recognize competence and innovation - and having the freedom to edit and improve the devices we own is an essential part of that. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers - we are the future rights holders, and the think tanks of much greater innovation.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Brad Houston.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

The thing is that the DMCA legislation was passed at a time when many emerging technologies were new to market and those market forces and legislators did not understand the full impact those technologies and legislation would have. Now, it has been years that have since seen a radical and marked change in not only technology, but the way it is integrated into our society and further how we interact with it. Back in times gone past, if you wanted to get under the hood of your car to make whatever modifications you wanted, you were able to do so. If you wanted to replace a stock part for something from a different maker, you weren't violating any laws - you bought the car, therefore, whatever changes you deemed necessary or simply wanted to make, you made. I believe that code in the ECUs falls under a similar category; that although the code itself may be proprietary, if you reverse-engineered and recoded that very same code would it not be brand new code? Just as new ages and new technology emerge, so do new laws and legislation to cover what has been happening and what will continue to happen in the future. Hampering our rights not only as consumers, but as Americans, in a country that was built and thrives upon freedom, will only prove detrimental to innovation in the future and a point of contention in the present. Please have the presence of mind to allow us to keep our rights, not just as consumers, but as Americans.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, brandon isralsky.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

If it has a chip, it's a computer. Stop fragmenting my rights (tablet, phone, wearable) to give rights to an inanimate device. Is it illegal to repair/improve a nondigital watch?? I could buy someone's painting and paint over it, destroy it, or have sex with it.. Why does someone retain rights because they built the device to be dependent on them? I can buy and use my devices offline and have them never talk to Apple again, why do they still control them? Can't I move around buttons in my car if I add a stereo or fog lights? Ú

Ú

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

I expect the US Copyright office to lead with real insight and innovation. We are having this problem because of a lack of truly intelligent leadership with real solutions.

The biggest problem is that everyone has disabilities, often unforeseeable by the manufacturer, that are helped by the use of technology. If you don't let people with disabilities customize their devices, they may not be able to use them.

Does someone with Cerebral Palsy have to break the law, just to make emergency calls??

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should be allowed to do whatever I like with the devices I purchase, within reason. So long as no other crimes are committed, there is no reason I shouldn't be able to switch carriers, customize electronics or vehicles or just tinker with my property. Locking these things into whatever default settings the manufacturer seems correct not only links my rights in terms of property but also makes it a crime for those looking to make these products better. Thank you.

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

When I buy an automobile or a piece of equipment it is mine. I expect to be able to make repairs and adjustments so that it will be most useful in its purpose. If DMCA prevents me from doing so I would likely still make those changes, but potentially be in the wrong. Please fix this. It doesn't make sense in MOST instances. The few should not be governed by the exception. That is not feel just or logical.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. I am providing comments on behalf of myself, Brett H Wiegman.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Very simply, in a free country where I am free to own property and other material goods, I should also be free to privately use these goods as I, not the government or some other corporate body, sees fit. This is a liberty that should be self evident in our democratic republic whose supreme law is the U.S. Constitution.

Thank you for your consideration.

Item 1. Commenter Information

I am providing comments on behalf of myself, Brooker Smith.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

We need to promote competition to keep down the cost of repairs instead of caving in to and allowing the consolidation of total control to large mega businesses with their lobbyists.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Bryce Nash.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.Ú

Ú

I purchased and race a 2014 model year electric car. This electric vehicle has the latest state of the art systems for vehicle controls, which means that several systems are highly integrated. In order to compete with this vehicle, modifications are necessary to allow it to perform in a manner which gets it around a race course faster, an accepted reality in the century-old practice of improving automotive technology on the test bed of racing. These modifications pose no harm to the original manufacturer, and if anything could serve to enhance automotive technology for all. Ú

Ú

Future modifications to automotive systems regarding safety and security mechanisms must also be considered. Automotive OEMs are not required to use any standardized diagnostic and repair information for airbag, braking, tire pressure monitoring, stability control, etc. systems. As these vehicles age, any repairs must be done at dealership due to the proprietary nature of these systems. Unfortunately, this is extremely expensive compared to the value of older vehicles, which means owners will either be forced to drive unsafe vehicles or scrap otherwise fine vehicles because cheaper repair methods are unavailable on the open market. Clearly, repairing the safety systems on your own vehicle should not be a crime, which is why a standardized on board diagnostic protocol exists for engines. Without such a standard for safety systems,

owners should be free to modify their car to keep it performing safely as necessary.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Cameron Heidenreich.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Charles Johnson.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. Item 1. Commenter Information

I am providing comments on behalf of myself, charles jost.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Look Oregon already made it illegal for me to fill my own gas tank, thus enforcing a whole group of deadbeats to the right to make me wait for refueling so that they get paid for a job that should not exist. Now you want to make it illegal to modify my car? I own a Jeep Wrangler. I should be able to tear my whole electronic system out if I want, and I am. **SINCE WHEN DID THE LAND OF THE FREE BECOME "THE LAND OF THE CORPORATELY CONTROLLED SYSTEMATIC DESTRUCTION OF RIGHTS TO EMPOWER LAWYERS, CROWNIES, AND THE SUPERWEALTHY". IF LAWYERS DON'T CUT IT OUT, THEY ARE GOING TO SEE ENTIRE GENERATIONS OF ENGINEERING YOUTH LEAVE THIS COUNTRY.**

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. Item 1. Commenter Information

I am providing comments on behalf of myself, Charles Pugh.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Ownership should mean I have the right to modify or dispose of my possession as I see fit.Ú

If a manufacturer voids my warranty, that is their right - but they should not be given the force of law to prosecute me for what I do with my possession.Ú

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite.

Companies are using copyright law to extend control beyond the bounds of traditional ownership, undermining that fundamental concept.

Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Americans should have an unfettered right to repair and modify their own vehicles.Ú

Ú

I come from a farm family. Prompt, affordable repairs of essential equipment can make the difference between crops harvested and crops spoiling in the field with a subsequently bankrupt farm. When repairs can be made simply in the field, farmers do that. But when the software in the engine's computer requires branded parts and access by password possessing authorized repairmen, the repairs aren't made in the field and are neither prompt nor often affordable. Give the farmer who owns the tractor, the engine, the pistons, and the plow access to the software so that the crops can be brought in before they spoil.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Chris Dunaway.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Chris Ferderer.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

As an engineer, I grew up taking things apart, putting them back together, modifying them, and learning how they worked. What does it mean when it's no longer legal to do these things. I understand the need for manufacturers to protect their intellectual property, but that must be balanced with the consumer's ability to make things work as they see fit, not as they were made to be used.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Christian Moomaw.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles. In some cases, even to make necessary repairs to vehicles, computer software must be accessed, which requires a trip to a dealership or authorized repair facility. This puts the manufacturer, not the owner, in control of who repairs their property.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders. Again, I maintain the belief that keeping well-intentioned people from using their electronics as they see fit is doing nothing to fight piracy. A pirate does not care if it's legal to do this or that. What a pirate does will still remain illegal, and they still won't care. Leaving these restrictions in place does not somehow make piracy "illegal-er."

Thank you for your time and consideration.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Christine Burnham.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

SIMPLY THIS - I PAY for it then I OWN it. This goes for EVERYONE.

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

You should start caring about the people's needs instead of how much money corporations are taking in. It does not trickle down, the fact that corporations get so many laws limiting what people can do legally with stuff they own is ludicrous. "Innocent until proven guilty" should apply to modifications too.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Chris Ward.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Conor burgon.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Item 1. Commenter Information

I am providing comments on behalf of myself, C Pallas.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles. If you buy something, you should own it - not be effectively borrowing it from the manufacturer.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

The current use of the copy also seems to abrogate the common sense principles of the free market. If you buy something, you should own it - not be effectively borrowing it from the manufacturer.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Dana Quinanola.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Look, I'm not rich I can't afford to pay someone hundreds of dollars for a \$25 repair I can do myself. I don't want to modify any of the original software or hardware, I just want to be able to fix what breaks.

Thank you for your consideration.

Americans should have an unfettered right to repair and modify their own vehicles.

The thing that made the USA so great between 1850--1950 was that, as a nation(a world too) humans were solving important issues through hacking, tinkering, experimentation and innovation. IP and DMCA have stymied this in the past 30 years. Please allow end users the right to own, modify, improve and expand our technologies and equipment. It will permit the USA to remain an engine of innovation.

Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Dashiell Barlow.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

Item 1. Commenter Information

I am providing comments on behalf of myself, Dave Loyall.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

I know that you don't have the authority to do this, but, it would be nice if somebody would prevent John Deere from password protecting tractor parts in the first place. Obviously!

Copyright was designed to allow smart people to skim a little off the top for themselves-- and why not, when they got there first! But, times have changed. Every single day, copyright law is twisted to stifle creativity, limit choice, and chip away at our freedoms. I have the right to hack and repair the things that I own. I have the right to take a thing apart, see how it works, and learn from it. As electronics and software are integrated into every kind of object and experience, please consider the needs of citizens.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Dave Ohlman.

Americans should have an unfettered right to repair and modify their own vehicles.

Copyright laws kill innovation. If someone invents something, that's fine. But to block other people from using that invention to improve the world is simply idiotic. Time to tear down these barriers of creativity so we can get the world's innovation engine running at full speed again.

Americans should have an unfettered right to repair and modify their own vehicles.

Frankly, I'm disgusted. I checked off all of the defaults as a part of this process, but I wanted to take a few sentences to explain why so that you have my personal perspective. I teach in the areas of copyrights and patents, so I know what I'm talking about.

Take software, for example. We don't buy software anymore. We license it, and therefore aren't able to do anything with it. That's not particularly onerous, but what happens when everything is licensed???? Your phone is licensed. Your camera is licensed. Your computer is licensed. In other words, you don't own anything and can't do anything with the stuff you spend money on.

Also, the abuse of the DMCA is ridiculous. What do you mean I can't rip the DVD that I just bought so I can put it on my iPad??? Seriously??? You guys just want me to pay twice for the same thing.

Had enough.

I am a licensed amateur radio operator and know that innovation comes from our freedom to re-purpose devices and re-use device parts or software in new ways. An example is Microsoft's Windows XP operating system. Even though I own a legal copy of the software I cannot use it on the internet without Microsoft trying to cripple it! This is unfriendly and predatory behavior that essentially demands I spend money on their newer products when the old product still does what I need!!!!!! Software does not "wear out" as hardware does...

Thank you for your consideration.

America is about freedom not just freedom for criminals to rampage stores and commit crimes in the name of "demonstrations" not just to allow "illegal border trespassers" to get free food, school and health care, but for the true citizens of these United States of America to be truly free!

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. It did this by preventing others from being able to copy their design or work and claim it as their own. In other words, Apple is the only company that can produce and claim as their own the iPad. Who should own an individual iPad? The purchaser to do with as he pleases: to use, to break, to add and remove software from, to sell to another person. But the purchaser should be limited in that he cannot sell that iPad while claiming it for their own work as something other than an iPad made by Apple. Just as a book cannot be published without the express permission of the author but the books that are purchased are owned by the purchaser to do with as they please. If the purchaser of a book desires to burn the book, they may. If they wish to sell the book to another person, they may. If the purchaser wishes to remove some pages from the book they may. So hardware, physical objects, should have the same ownership but not the rights to distribute as one's own intellectual work. Nor the right to copy significant portions of the book and distribute it free or paid without an agreement with the original author.

Copyright it's being abused to take ownership away from purchasers and pass it to the owners of the intellectual property. Copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I

should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.Ú

I don't want to be forever beholden to my car dealer. I buy cars and run them until they are over 200,000 miles. I've found doing maintenance myself and using my local mechanic to be FAR less expensive. My local mechanic is far less apt to replace things that don't need to be replaced. In one instance I went in for a "free oil change" and got a bill for new brakes when I'd had them done only 8 months earlier.Ú

I do not want to be a slave to Ford, Toyota, Subaru or any other dealer or manufacturer.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. I am providing comments on behalf of myself, David Herb.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

I consider anything purchased by an individual or organization belong to them and it is their freedom of choice to modify or change or fix the item. It supposed to be legal and anyone trying to prevent it is violating the basic rights.

I will do whatever I want with my property even it is legal or not as I earned it and no one gave it to me for free!

Thank you for your consideration.

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Please consider ending this debate and ownership and our personal ability to use our devices in legitimate personal ways. The belief that you can't choose your own mobile carrier, even worse when traveling abroad selecting local mobile carriers, ability to backup media, ability to place that media on a HOME media server to view throughout the house, and similar legitimate uses. We're not thieves and resent being treated as such. I don't assume you are dishonest yet that is exactly the assumption of me. We all know the true criminals won't be hindered by these questionable protections so please stop the madness.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, David Smith.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

I'm a member of a small slice of Americans: I fix things instead of throwing them out when they break. As an example, I have a Volkswagen that is old enough to vote.Ú
Ú

There are opportunities to modify the electronic parameters in the engine control unit (ECU) to change the car's performance and fuel economy to better suit my needs. The ECU in the car contains a software map that takes as input things like throttle position, car speed, and air temperature and determines how much fuel to inject into each piston. I cannot legally change this program, even though I own this car. Every single bit of it is owned by me and can be resold by me to another person, but incongruously I am prohibited from changing the code on the computer within the engine compartment.Ú
Ú

Please change the law to make this legal.

Copyright was designed to encourage creativity and fuel innovation. It was intended to provide an absolute monopoly for the author *for a limited time*. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

These companies think they're looking out for their bottom line in the short-term, but this line of reasoning is pathetically short-sighted. These roadblocks won't stop people from being curious and exploring their creativity, it only slows them down. When profit-minded entities can finally fix their sights to a future of true innovation, people will truly work together to make the world a better place.

Thank you for your consideration.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Freedom of expression should not be encroached upon. The rights and freedoms to use lawfully obtain digital hardware, software, and material (audiovisual works, data, and other digital information) foster creativity, expression, and healthy competition. Innovation cannot thrive when stifled by big corporations seeking to monopolize their industry. Individuals who lawfully obtain digital devices, software, and audiovisual works should be allowed to work on, repair, and improve, for their own personal needs, expression and enjoyment, the devices and work they lawfully obtained.

Thank you for your consideration.

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Imagine the surprise when I discovered that after all that money I paid for a new car, apparently, I do not have the right to examine the software instructions that run it. So, who exactly 'owns' my car. The Founding Fathers are spinning in their graves (perhaps a new power source?) over the plutocracy that our Republic has become. Senators and Congressmen, bought and paid for by the Auto Industry, Motion Picture and Recording Industries to pass the anti-American DMCA, making me a criminal if I attempt to fix the annoying seizure-inducing flashing white circle on the built-in GPS display.

These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Drew Carey Buglione.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Americans should have an unfettered right to repair and modify their own vehicles.

I can swap the tires, wheels, hood, mirrors, engine, phone case, phone screen headphones, pretty much everything. I might the car, phone, tablet, game console, tractor, etc. I skills be able to tinker with it, even the software, if I'm doing it benevolently with no mal intent. I should be allowed to improve, or innovate and find new features, uses, and applications with the devices I buy. I should be able to increase the security on my devices when the stock security is less than adequate.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Along with the boilerplate that is included below I'd like to add that I would like to be able to have a sense of ownership when I buy something, that the manufacturer should not prevent me from modifying in any way what I have paid for. Sure, they are within their rights to void the shit out of my warranty but I knew what I was getting into from the start so why make it harder? Who do these laws protect? What function so they serve? That is the question.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Edward.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Please especially consider the needs of patients, for whom the right to access their own information at the time and place of their choosing, and without monetary repercussions, can be a literal life-or-death need. This is no less true for consumers who would create and implement new safety modifications to the increasing array of automated systems found in every home. Even a modification which improves daily function, quality-of-life, or mood can improve overall physical and mental health, limiting poor decision-making and inattention.

We are humans, and the ability to adapt our surroundings to meet our needs is how we prevail when faced with the most difficult of challenges. Please do not permit our most powerful tool to languish unused where it might instead be incrementally, or

dramatically, improving life for all who follow.

Thank you for your consideration.

These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Eric.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Eric Sharp.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

When Corporations are allowed to limit customers' rights, they form another type of monopoly. This limitation on customers eliminates driving forces that bring about improvement and increase value in products, making profit and control the bottom line. What about raising the quality of life for all, and caring for the environment?

As a teenage boy, I was given an opportunity to tinker with computers, in that growing obsessions I learned to take apart my computer and put it back together. It fostered a problem solving attitude that I carry with me today. To be considered illegal to modify equipment that I own, whether it be through software or hardware seems ridiculous to me. I want my 2 kids to be able to become problem solvers and adapters through being able to tear electronics apart and put them back together, especially with the digital age, being able to adapt and approach problems that way is crucial to their future and I hope that it can be something that can be done legally

Thank you for your consideration.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles. If I pay for it then I own it and everything about the device. The seller only has the right to sell to me if I choose to buy from them. They DO NOT have the right to tell me how to use it. It would be like me buying a house from a contractor and them telling me I could NOT make ANY changes to it (paint walls, change the layout, change faucets or what have you). Bottom line: I bought it and I own it.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

As a law abiding citizen, I disagree with your office lobbying against my own repairs and/or modifications of devices, household appliances and machines that I own and wish to understand better in my free time.

I am tinkerer by nature and by doing this, I feel that you forcibly trying to suppress a passion I have had since birth. I believe that this is unconstitutional. As a free American I believe that I have the unalienable right to the "Pursuit of Happiness" and as for me, that is researching, disassembling and repairing the things that I own.

I have a passion for Self Education. Many great Americans such as Benjamin Franklin, Thomas Edison and the Wright brothers(in my humble opinion) would be classified in this category of person. I ask you, what would the world look like if these gentlemen were forced to suppress their desire for knowledge and understanding in the way things operate?

I cannot help but feel that with the actions your offices are taking are encroaching upon my rights as an American.

I thank you for your time and your consideration.

God bless,

-Frank L. Schabell
Amateur Tinkerer

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Galen Sinnock.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Garrett Burd.

Item 1. Commenter Information

I am providing comments on behalf of myself, Gay Gordon-Byrne.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

There should be a distinction between the rights of owners of motorized land vehicles to repair and customize their purchases, without being in violation of Copyright Law. Without the ability to control the use of owned assets - the buyer is no longer a buyer but an unwilling, and often unwitting, licensee.

Copyright claims that intrude on the owners' use of purchased equipment are unfair to owners.

Thank you for your consideration.

Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, George Harasimowicz.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Gregory S Jones.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Ian Guy.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

There's a long and rich history of Americans modifying and tinkering with cars to bring future generations safer, more efficient engines. At the very least, it's been a starting point for me and several of my friend's foray into inventions. Suppressing innovation with laws like these brings no positive effects, while hindering new inventions from this fine land.

In the end, I, the consumer, own each of these devices in whole. Chaining them to some organization, corrupt or not, infringes on my property rights.

Thank you for your time, and I hope you seriously consider the topics in this letter.

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Jack Danos.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, James D Ash.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. Item 1. Commenter Information

I am providing comments on behalf of myself, James Sneeringer.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Strong copyright protections are essential to the U.S. economy. If companies are allowed to distribute copyrighted content they did not produce, it could seriously harm incentives to invest in high quality content and software production.

However, copyright law must not be allowed to abuse individual end users, and prevent their full use of property they own. Firmware can only run on the device for which it is specifically written; there is little fear of any harm from piracy of firmware. To run it you need the right device, for which the manufacturer was paid in the first sale.

If a person owns a device they should have full legal access to its firmware. Otherwise property rights will be hollowed out from within.

These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Jamien Shea.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Item 1. Commenter Information

I am providing comments on behalf of myself, Janice Maxwell.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

It is ridiculous that a farmer is no longer not just incapable of fixing his equipment but legally bound not to do so. There needs to be exemptions for this in particular. With increasing populations and decreasing food supply more and more farming will HAVE to be mechanized making farmers rely more and more on computerized equipment. In a perfect world, equipment would always run smoothly through it's like, but I hate to break it to yah, we don't live in that world and it seems like farm equipment inevitably breaks more often than any other equipment (possibly because of its extensive use). and farmers NEED a way to be able to fix their equipment on their farm in a timely manner. Waiting two days for a part and another two days for a mechanic to come out because the equipments software and computer is locked and proprietary is just not going to cut it with our growing needs in this world. An exemption doesn't need to be made but it must be made and if it doesn't happen now, believe me it will happen soon eventually when our world population and food crisis will not be able to wait 4 days for their diminishing supplies. I hope you take this into consideration and give a farmer exemption on this proprietary software.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. I am providing comments on behalf of myself, Jason Serafino-Agar.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, jeff redding.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Jeffrey Justice.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

As a member of the lower middle class and a working American with little to spare, repairing my vehicle is both a hobby and a budgeting tool. My vehicles are at least ten years old, but when the time comes to purchase a new vehicle, I am the lawful owner of the vehicle, and unless my repair efforts can be proven to be attempts at circumventing the manufacturer's safeguards in order to illegally profit from the results, I shall remain forever more, a peaceful member of society, engaged in the age-old practice of working with my hands.

Copyright was designed to encourage creativity and fuel innovation. Wilbur and Orville Wright attempted to secure the intellectual rights to their invention by means of the U.S. Patent Office shortly after their successful aviation experiments in 1903, and yet rivals continued to hound the brothers well after Wilbur's death in efforts to discredit the Wrights as the true inventors of the airplane.

It was the patents that secured the invention in the early days, but it was the Wright's persistent lawsuits that kept the hounds at bay. And yet today, the ability to build an airplane is shared across the world and the credit, rightly earned by Wilbur and Orville Wright is attributed without the need for copyright infringement lawsuits every time a company wants to build an airplane. The respect for the original inventions has fallen into a sort of public domain, and earning the right to fly is a humanistic goal, now that the aerodynamic tables created by the Wright's wind tunnel experiments are proven every time a jet liner takes flight.

It is no small thing to acknowledge that every experiment carries some potential, whether intended and understood or not. Let the freedom of innovation know only the borders embroiled by a wing as it lifts a hundred human beings into the air. Let no fear accompany the right to repair what one person has acquired for themselves. Let those

who create valuable software be properly compensated for their work, and also let the limits of their intellectual ownership be clearly defined so that consumers are aware of the limitations of the software licenses they purchase.

And let us work with compassion and dignity towards each other to create a solution to this immense and pivotal issue. Let our grandchildren be able to use Grandfather's tool set and Grandmother's Javascript debugger. We owe our children the freedom to repair, and be repaired.

Thank you for your time

Jeffrey R. Justice

Ú

It's my car. I own it. The certificate of title says so. I paid for it, in full. I should be able to do what I want with it, subject to the usual vehicle and traffic laws, etc. I don't want to "steal" or duplicate anyone's software. I am entitled to exercise dominion and control over my car.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Jeremy Barr.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

As cars get more complex and repairs expensive at dealerships, I want to save my money by working on my own car. I will need to do this with computer equipment that is not prohibited by copyright. I also cannot afford my own lobbyist to Congress.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. Item 1. Commenter Information

I am providing comments on behalf of myself, J Hauer.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.Ú

Ú

This is an area that impacts me regularly. Our family owns several vehicles, and after paying for them, I consider it my right to repair and even improve them, as long as the repairs are within safety regulations.

When I purchase, or legally acquire something, It should be mine to use, repair, modify or study, as I see fit. It is one thing to protect the legitimate rights of inventors and copyrighters, and another to stifle further understanding, invention, and simply the right to use, repair or modify my own property.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Jill McDevitt.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

While content creators have a justifiable interest in protecting their are, and corporations have a legitimte interest in protecting their trade secrets in no way should they be allowed to create a hostage class of consumers who no longer have little or no opportunity to buy products w/o software, but are turned into rightless licensees instead of empowered and (full) owners of the products they buy.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Joe Perugini.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

This is just an excuse to commit odometer fraud. Don't let people do this.

Everything that's being submitted to you regarding "unlocking" "jail breaking" "re-mixing" and everything of the like is really just code for "stealing." That's all these people want, to steal things they did not pay for. Do you honestly think the thousands of people from reddit.com signing this petition have actually jailbroken their phone to "make sure it has the latest in security" or do you think that maybe they did it so they could get angry birds for free. Or do you think maybe they did it so they could enable a wifi hotspot without their carrier charging them... Or gee, I don't know, maybe they did it to follow the instructions of thousands of youtube videos with millions of hits showing you exactly how to steal digital products. Go on youtube and type "jailbreak *insert device name, iPhone, iPad , etc* " and see for yourself what people are actually concerned with. You'll be hard pressed to find a handful of videos showing you how to "better secure" your device, and you'll find countless "how to get free games & music" instructions.

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

I helped my business obtain patents for our unique and innovative use of the Internet as a service for flight planning. This was appropriate, justified and eventually granted by the Patent office.

Copyrighting products, not services, to prevent the legal owners of those products is absurd. Once the product is purchased by a legal, rightful owner they are entitled to do whatever they want to do with it. Preventing any desired purpose by the owner demeans the value of their purchase. We certainly wouldn't tell someone that can only use their wheat flour to make cookies when they bought it to make bread.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

I have fixed things all my life, I really don't need the government telling me what and what I CAN'T fix. I understand copyright law and do know you cannot clone your own software or firmware from another individual or corporation, but it should be up to me whether or not to modify it for my own use. Once I purchase something, I own it. I do not care what the software people say. As long as I do not clone it or copy it, it is mine to use as I see fit.

Regards,
John CAhill

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, John Fluera.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Speaking in terms of my own experience, I've found a number of owned items such as color inkjet printers, cameras and tablets/computers for which manufacturers have sought to limit my ability to address "built in obsolescence," what should be ordinary low cost repairs and service requirements ... in order to require new purchases or expensive "authorized service only" licensing.

This kind of activity by manufacturers was addressed years ago in the 60s with lawsuits over such things as Kodak-required processing, "licensed dealer only" camera repairs and so on. Don't let our technology companies backslide with high-tech mumbo jumbo. These are basic rights. You sell it to me, I now own it.

Thank you for your consideration.

Thank you for your consideration.

I make my living repairing, configuring, and installing, computer systems, networks, printers etc. You can include most of the devices you have listed and some you have not. I have been doing this full time since 1977 for businesses and individuals and I presently intend to continue this full time endeavor. If they take that away, what is left? What is left is our dependence on Corporate America and Big Government to solve all of our issues.. Really? How is that working so far??? Healthcare is a disaster!! Have you ever tried to call Microsoft for help? I could go on and on.....

Thank you for your efforts, I am 100% in agreement.

John Nelson

Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, John Thomas Pulliam.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, John Waiveris.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

I am a software developer and repair my own cars. However, I increasingly am concerned that new cars are not repairable without highly specialized tools, secret APIs, and secret encryption keys. For example, my 1996 Ford Ranger needed a \$3000 electrical tool to bleed the ABS brakes. As an older car, the tool was no longer available and the local Ford dealer no longer had the tool. Luckily, there I found an online discussion about mechanical trick that saved me from having to remove the entire ABS system just to keep the car. Ú

Ú

Though this is just the beginning. Newer cars are taking this same process to a new level. The tools are even more expensive and there are no mechanical trick that can get around encryption. Even worse, by making these tools copyrighted, even discussing or building tools to fix my car can result in a lawsuit. Ú

Ú

Obviously market forces aren't preventing manufacturers from building cars without these digital locks. Please add a DMCA exemption to enable a healthy market in which people can maintain their own cars.

undefined

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.Ú

Ú

Manufacturers will probably claim that user modifications will make the car less environmental regulation compliant. Let me suggest that some mods will improve the vehicle's environmental regulation compliance. To make their vehicles appeal to the broadest cross section of consumers, manufacturers have to compromise between performance, and economy when tuning engine performance. Some people, myself included, might be willing to accept a slight decrease in acceleration/performance to obtain better overall fuel economy. I should be able to do that without facing criminal arrest, or copyright infringement legal action.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

And please remember that creating a legal framework that respects freedom is the only way to maintain public respect for the law and institutions of government. The institutions of copyright law will become irrelevant if the law is so tilted against consumers that the vast majority find themselves having no respect for the law.

Thank you for your consideration.

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders. Rights holders' rights shouldn't be extended to limit the benefit I can derive from a device, piece of media, or software that I have purchased. That perverts the intent of copyright and is blatantly anti-consumer. It leads to a world where consumers can never own the things they purchase, where everything is really rented or leased. That may be good for mega-corps and other businesses, but we the people need our government to stand for our rights first.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Jorge galvez.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Item 1. Commenter Information

I am providing comments on behalf of myself, Joseph Knobbe.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Farmers grow the food you eat everyday. Restricting farmers to rely on unchangeable, locked systems only repairable by manufacturers limits the production potential of agricultural producers everywhere. This translates to an immeasurable decrease in the food supply chain just from delayed work times. Taking away the ability to repair, maintain, and possibly improve a producer's equipment goes against every notion that a farmer's ingenuity is unmatched in our society. Making this illegal challenges the roots this country was built on. The farmer finds ways to "make hay when the sun shines" however he/she has to, but they shouldn't have to break the law to do it. Please, let those who feed the world do what they've been doing best for generations, growing the most and the best food possible in the most optimal conditions made available to them. Thank you.Ú

The creator of software has every right to protect that code. However when that code is running on hardware that I have legally purchased, I should also have the right to choose what software runs on my hardware. Just because the software running on my hardware (be that phone, tablet, vehicle, or anything) is protected, that does not mean that I should not be able to unlock/replace/modify that software if I am doing it solely for my device and not for commercial gain. Please don't lump hardware with software protection and make average Americans criminals.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Joshua Clark.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Joshua Curfman.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. That alone is a great thing, truly. But it's now being abused to do exactly the opposite every single day, stifling creativity, limiting consumer choice, dismantling property rights, and chipping away at our digital freedoms. I should have the right to remix, modify, and repair the things that I rightfully own. As electronics are becoming increasingly integrated into every kind of product in this world, please consider the needs of consumers as well as rights holders.

This trend needs to be reversed. Someone needs to draw the line in the sand, take a stand, and say "this far, no farther" to those who would push to abuse copyright protection. I am hereby doing this, as are many others who see the way things have gone and know that it isn't right. It's time to stop punishing those who wish to tinker, to develop, and to safeguard. It's time to make a stand for repairability, experimentation, and openness.

Thank you for your consideration in this matter.

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

None of these facts harm the copyright owners themselves. They have earned the money from the purchase, they have no reason to have control of something I own. I am not agreeing to a lease from the copyright owner when I make the purchase. For these rights to be halted, I am trusting my life to something unknown to myself.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Julie Castaneda.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Justin Leishman.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

If someone wants to sell me something with strings attached, that's fine. Have them write a contract so that I'll know I'm in over my head. Don't let them sell me something and then later come to inform me that something I've done to the thing I own is "forbidden". That makes it sound as if I'm only leasing it from them.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

It is absolutely unconscionable that a country built on freedom of creativity would stifle that creativity for a few dollars. As has been proven and will continue to prove, that as innovation comes to market it creates more innovation from those that take those ideas and try to create their own.

When will government learn that more government is not the answer. We have elected officials that have no idea about technology and innovation passing laws about technology and innovation. Thanks Newt Gingrich for dissolving the office of Science and Technology where these elected officials at least could find a clue.

Apple would never be as the actions of its creators would be illegal
Microsoft stole ideas and Bill Gates would be behind bars
The rest of us would be arrested for using the stolen products....

Crazy, Nutty, Uninformed, Ridiculous and Shameful.....

Copyright Music, Copyright Books, Copyright works of art but

DO NOT COPYRIGHT MY ABILITY TO USE IT THEY WAY I WANT TO USE IT !!!!

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Karl Woerth.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

I own my products and devices. It should be my choice to do whatever I want with them.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Kathryn Christensen.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

I bought a new car last year and I discovered to my horror that I can not turn off certain aspects of the security alarm through the user access dashboard controls. I'm tired of having my car honk at me while sitting in the drivers' seat with the key.

You see, if I turn the cars engine off and do not immediately exit the vehicle and walk away it will honk at me trying to tell me I have left the key inside. But seriously, I should be able to sit in my car without having the engine on or have the key in an accessory position to run down the battery while I write up a grocery list, reply to a text, or make a phone call.

My car will also arm itself while I'm still sitting inside if I'm there long enough, arm itself if I take too long loading grocery's into the trunk, or arm itself while I'm taking grocery's into the house. Basically, I have a maximum of 120 seconds to do something after I turn my car off before it starts doing stuff I don't need it to do-like locking me out.

I truly miss my old 1992 Honda that let me decide 100% if I want to walk away with the door unlocked or let me sit inside for hours with out being locked in or honked at. I would love to take my new car to the dealership and have them hack the security

system so I can control whether or not I get honked at or locked out.

It is not possible for a programmer to program every possible scenario or option that an end user may need or want. If I fork out \$22,000.00 for an item I want to be able to mold it to my needs and have it work the way I need it to.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. Ú

This is near and dear to me, as a professional, independent mechanic, it seems crazy that I and others like me cannot access factory software to diagnose and reflash any automotive electronic system. Makes me long for carburetors and breaker point ignition systems.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Kelsey Waters.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Kenneth Kolbly.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright law, along with Patent law, was originally designed to encourage creativity and fuel innovation. And it has succeeded at that. But copyright, and specifically the DMCA, is currently being abused by content owners to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. This is a property rights and/or fair use issue. Most of the best engineers in this country started out as youngsters by taking apart the things that they (or their parents) owned and learning to understand them. To continue to support the development of these top-notch inventors and engineers, it is imperative that modification and tinkering is permitted from the lowest levels. It is essential that all of us have the legal right to modify and repair the things that we own. I can legally take a printed book and cut it up for a display or copy passages to post on my wall. This right to fair use must extend to all copyrighted content. The type or location of the content should not exempt it. Electronics are being integrated into every kind of product and copyright is being used to protect the software in those devices, making this issue pervasive in every walk of life. Please consider the needs of consumers as well as those of the rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.Ú

In my state they have passed a law so that I cannot rent a 200.00 diagnosis tool, This seems like such a waste, when you can make a few and rent them rather than hundreds and waste resources. In this economy I need to save as much as possible, by being able to repair my own vehicle.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

It's an outdated system that fails to take into account the explosion of software that the new millennium has seen. The DMCA, if it continues to stand, will lead to the stagnation of innovation in the United States. My vehicle is my property, and I should be able to repair or tinker with anything that I own.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Kyle Kornkven.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Luis Marrero.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Overall our economy would benefit tremendously if everyone doesn't have to start from scratch and can build on work that others have already started. It would benefit the entire society if people are allowed to be creative.

Thank you for your consideration.

We must break up the isolation/monopolist that comes from being able to connect a product through software, or repair or perform maintenance to a product but limited only to the company that offered said product for sale to the consumer.

As a consumer, I demand to have property rights. I buy something, I own it. Period.

Thank you for your consideration.

These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Mark Bowen.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Item 1. Commenter Information

I am providing comments on behalf of myself, Mark Jones.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles!Ú

Ú

Example: I have an American vehicle made about 2002. It runs fine. There is a 'feature' that I would like to change. The manufacturer will not help me: they just want me to buy a new vehicle. Among other considerations, buying a new superfluous vehicle every few years ONLY contributes to human-centric climate change.Ú

Ú

To me, upper executives should be sending their kids to ivy-league schools on money made trying to better the human condition. Not soaking fellow citizens.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. Thank you for your consideration.

These things all seem quite self-evident. I realize that the point-of-view of many people

can blind them to certain things. I.E., Monopolies are destructive of society in general. Yet every day, almost every minute these days, the people need to be on guard against attempts to create these same monopolies.

Homo Sapiens is capable of so much it boggles the mind. Yet so much of that creativity and ingeniousness is put to use hurting and controlling people. Shouldn't we start down THAT road?

I have been a car hobbyist for 15 years. Being able to use a computer to diagnose my engine and determine problems or the root of potential problems makes me a smarter mechanic and consumer. Being able to access my cars ECU and log data on timing, compression, o2 levels allows me to diagnose my own issues without having to spend money at a dealership which could potentially cost thousands of dollars. I own my vehicle and should be able to change the software just as simply as changing a tire because its MY CAR

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Mason Hoppes.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

eWaste is a huge problem, so we should be free to re-use as much as possible. When we are locked out of these devices, they become useless for any other than their intended purpose and usually end up in a land fill.

Thank you for your consideration.

Personally, I believe that this is America, and that we had formed under the idea that this is a country where there is a freedom of speech, and if this country was formed today, the founding fathers would have included the freedom of doing what we want to our own property. When we buy iDevices, computers, gaming consoles, eReaders, smart watches and smart TV's, we work hard and pay for them, so legally they are our property to fix, hack, jailbreak or resale. So I believe it is only in goodwill and the idea of freedom that we should be able to tinker with whatever devices we own or pay for.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Matthew Footer.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

When my Chevy Nova needed a new radiator I didn't have to get permission from Chevy to replace it. When my Buick Skylark needed a carb rebuild I just did it, without needing to get an unlock code from Buick. When my Honda Civic needed new drive axels I just bought some rebuilt sand tossed them in, same goes for the timing belt. When I wanted better sound I simply ripped out the original head unit and put in my own. The idea that car owners don't own the code running through their car is ludicrous. If some car manufacturer wants to retain possession of part of my car then they can pay for repairs.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Matthew R. McGuire.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders. Also Cable service providers and or other telecommunication entity's should all maintain services to prevent locking of services that would otherwise promote a competitive/fair market.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Our nation needs laws that will progressively move us forward. Technology tools are one of the most important assets to individuals daily lives and we should be able to make the most of these devices by fully utilizing their capabilities. Jailbreaking is often necessary to yield these capabilities and can make the users lives both easier and more effective.

Thank you for your consideration.

As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Years ago the FCC demanded that tv providers would allow consumers to own their cable boxes. They did not not clearly define the use of mcards which allows companies like Verizon to charge PER box a 'nominal' fee. These cards should be a part of the consumer's box and as such should not be charged for their use. The Verizon rules do not explain the use or charges for said mcards.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Thank you for your consideration.

As a lifelong mechanic, engineer and tinker-er, who is now a veterinarian, I often find the need to repair, adapt or modify equipment to serve my needs. It is far too common that the equipment I need for both personal or professional use is just plain not available, at any price. Being able to adapt equipment, and fix equipment in the field, is paramount to my personal and professional freedoms and success.

These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Michael Accardi.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Michael P Dickerscheid.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Michael P Schrom.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders. I paid for it and should have the right to modify and repair it to extend its use, or change its use if it no longer fits my needs. My method is more environmentally sound if I can stop another piece of equipment from going to the dump to soon.

Thank you for your consideration.
Michael P. Cumbee

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation of American makers/inventors. But it's increasingly being ****ABUSED**** to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms turning us into "sheeple." We are country of makers not merely consumers. We should have the right to remix, modify, and repair the things that we own as much as our ingenious forefathers did. Don't permit our rights to be taken from us especially as electronics are further integrated into every kind of product becoming "the Internet of things," please protect the needs of consumers /makers as well as rights holders.

Thank you for your consideration.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Mike Lezan.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Where we go as a society depends on avoiding mistakes of the past. Liberty is dwindling, globally. Not increasing as it should if we are to advance. The pieces are in place for prosperity, at least in a relative sense, for many people. In order for this to trickle farther down the stream and improve the lives of many more, the middle class all over the world needs more power and opportunity. There is a demand and this will be a lot easier if the legislative elements actually represented individuals.

Thank you for your consideration.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Nalewaik.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

As far as I understand it, the ostensible purpose of copyright is to fuel creativity and innovation by giving people a financial incentive to create and innovate. Copyright is now being abused to do exactly the opposite. Creativity and innovation do not happen in a vacuum, they build on things that came before. One of the major groups of people who innovate, benefiting us all, are people who like to tinker (think Apple and Microsoft). When copyright law prevents people from understanding the products they buy and own, and from improving upon them, copyright then stifles innovation and encourages rent-seeking, not innovation:

<https://en.wikipedia.org/wiki/Rent-seeking>

Copyright has a place, but its reach and abuse has crossed a line where innovation and creativity are hindered. Please allow Americans to continue to be a culture of tinkers and innovators!

Sincerely,

Nathan

The corporations SELL their products to consumers like me, the corporations enjoy huge profits and deserve to protect their designs and devices from unethical commercial competitors. However, by accepting money from consumers like me, these corporations have agreed to release ownership and control of the items purchased, that is the heart of this issue.

Thank you for your consideration.

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Nicholas S Wilhelm.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. By restricting this type of innovation, you are just inviting a different type, one that you will never be able to control. Instead of focussing on how to improve a device or service, innovative minds will first have to come up with a way to circumvent your new laws. Furthermore, you will drive our brightest scientific minds away from this country to a region that respects free market ideals.

You are creating a scientific dictatorship that will be a living nightmare for your progeny. Please reconsider your actions.

Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Obadiah Neasham.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. I chose to include what I did because of my personal belief in the merits of each.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Patrick Maxton.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own.

If I rent or lease something, I am bound to a rental or lease agreement which might effect my freedoms. However, if I purchase something, then I own it outright and it is no one's business how I use it, unless I am infringing on their rights.

As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders, AND VOTERS.

Thank you for your consideration.

Item 1. Commenter Information

I am providing comments on behalf of myself, Pete McGrath.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Quinn Loggins.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

With car prices going through the roof, and car maintenance and repair as well, we need to be able to fix our own cars. I understand that they should meet certain standards, but replacing a broken lock on a door should not be considered criminal. Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

There is a difference between ownership of a product and copyright. Once someone owns the product, it should be up to them how they maintain, repair, or upgrade the product. By working with these products young people learn how devices work, and this is important to the growth of technology as a whole.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, R. Propst.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

I am not the true owner of a device if I cannot legally modify or adapt it to my needs. The full concept of ownership of a device cannot disappear because of twisted copyright considerations.

Thank you for your consideration.

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. Americans should have an unfettered right to repair and modify their own vehicles.

The digital age is often portrayed as a time of unlimited opportunity, when it's possible for anyone to jump in and create things to improve their lives in both physical and emotional ways.

Copyright was designed to fuel this movement of innovation, but it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. People should have the right to remix, modify, and repair the things they own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights-holders.

Thank you for your consideration.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Reese Howell.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

It's time that manufacturing companies learn that we are customers not an open pocket for them to draw my money out. Where is the freedom this country was founded on. We already pay high prices for hardware, software and access. We should be able to try and save something on self repair.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Richard Purvis.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Rich West.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

As the owner of several classic cars, I gain great enjoyment out of the creativity one can apply to the stock manufacturer platform which is provided as a base to work from. As an IT professional, that creative outlet is enhanced by the additional features on modern vehicles. Personal customization of the vehicle, regardless of its age, must continue unhindered in order to spur progress: how many new unique designs have come from those that tinker in their own garage? Current law prohibits any person, including the vehicle's lawful owner, from tampering with the electronic "locks", at any time, auto manufacturers have put into place to guard the computer systems that are installed in modern vehicles. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to protect, for a short time, fresh new ideas from the thievery of others hoping to cash in on the profits. The intention was to encourage creativity and fuel innovation while allowing a short time to protect those ideas. Yet as each minute ticks onwards, the intention of the law is being forgotten and the law itself is being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. As a free consumer in the United States, ownership should not come with strings attached: I should have the right to modify and repair the things that I own regardless of the format they are in; be it analog or digital. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Americans should have an unfettered right to repair and modify their own vehicles.Ú

Americans should be allowed to own their own cars this is no longer true. I suppose I won't be able to fix my own house either in the future.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

I dread the day when my house is copyrighted or DMCA'd with some form of needless encryption so I can no longer do repairs on it myself or higher my own trusted repairman. Only lengthy, expensive, builder authorized service will be allowed.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Robert Combier.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

If I buy a piece of equipment, I should be able to do what I want with it, since I own it. If I want to modify it for my own purposes that should be legal. If it violates the warranty, that is my problem then, I should not be able to seek reparations under it. As long as I know this going into the contract, then I have no problem with it. Any lawyer worth his salt can write this up, and make it binding. Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Robert Swarner.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

With all of the electronics in vehicles today, I should have the right to access and attempt repairs myself. I didn't hold auto manufacturer's responsible when I messed up MY starter; I will not hold them responsible if I mess up MY car's computer. I paid a lot of money for my car. Everything in it is mine to fix. I am not selling or sharing their programming with rival auto manufacturers. I want access to MY software! Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Thank you for your consideration.

Tinkering, modifying, repairing, is how the innovators of America learn to create the future. Please don't cripple American innovation or our desire and need to re-use and re-cycle what we already own and in many cases spent thousands of our hard earned money.

Item 1. Commenter Information

I am providing comments on behalf of myself, Ron Martin.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Many of these instances of copyright protection only serve to force us to buy a product on a manufacturer's schedule while they hold back updates from devices that are clearly powerful enough to run them. Most of these devices are built to run open source software be it Android, Linux or others. We cannot in many cases even install these free softwares legally because we would then break the sales cycle even though we would probably end up with a more capable device simply by upgrading using OS' s such as stock Android. Please allow me to actually take ownership of these devices that I have invested obscene amounts of money in by giving me the freedom to extend their lives and to remove the bloatware that I have no interest in owning or using if I like.

I do not pirate music, movies, or software and it is not fair for these manufacturers and

carriers to hold me hostage. That is something an actual pirate does.

Thank you for your consideration.

As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Technology, with its rapid pace of upgrade and change, has increased the consumption and waste of Earth's resources. In many industries, the pace of development has slowed and there is not as much innovation as before and the manufacturers are not content to let their sales drop when they are no longer able to innovate. They are then trying to use artificial means to stimulate their sales - a new form of planned obsolescence. By controlling what can be loaded on a machine and decreasing the usefulness of devices over time, they can enlarge the gap between their older products and new ones artificially. The result is more waste. The result is less innovation. The result is a drain on our economy. The result is stagnation.

I write this message on a computer that is about 6 years old, because Apple was not

able to close this system off using DRM. However, my tablet, an original iPad that is newer, loses functionality each day as I am forced to upgrade to Apps that are not compatible to the older iOS that Apple has abandoned me with. Thus, even though my hardware is still functioning well, its usefulness erodes due the the manufacturer's constraints.

Think of it in terms of educational evolution. I didn't discover or develop Algebra; I had to learn from the building blocks of those ahead of me. The same is true for anything else. Having just registered for the first classes of my MBA, I can assure you that I have not discovered much of anything! I've held onto the coattails of many amazing minds before me. My point is this: if I am to learn about the operating systems of my phone or video game system (for example), I will be greatly hindered without access to said operating system software. Perhaps I am developing security software as a small startup or research outfit, criminalizing tinkering will only hinder progress and advancement. We need to have access and freedom to not only learn, but also to fix our own items. If I have paid for something and own it completely, I cannot fathom how I should be limited to what I can do with it. This kind of stranglehold on freedom goes

against the very idea of American ingenuity and exceptionalism. Let us become more and more exceptional as time moves forward.

Thank you for your consideration.

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Imagine a world where the devices and things around you, devices you own and purchase. Can't be fixed by you when broken, can't be told what to do by you, and can't be used to do something amazing that could possibly change the world by you because you can't tinker, modify or use it because of its software. Lets live in a world where garage tinkers, hobbyist, students and Joe Public is free to use the machines they own. Instead of a world where those same people are held hostage to the whims of the corporates that make the devices.

Thank you for your consideration.

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Samuel Walletz.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Americans should have an unfettered right to repair and modify their own vehicles.Ú

Ú

This is particularly egregious for farm machinery. When it is time to plant, tend, or harvest, having a machine sitting around for days waiting for a technician to arrive just to diagnose the problem can jeopardize the entire crop.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. Ú

I must be able to personally assure myself my car has not been tampered with or programmed in a way counter to my own personal best interests. I must be able to repair my car if (when) it breaks.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

I should have the right to archive any digital media I legally purchase for my own private use. I should have the right to translate any digital media I have purchased for my own private use from one digital format to another, possibly more advanced, digital format in order to preserve my ability to use that media. Copyright laws are meant to be used to protect the rights of the author and should not be used as a way to obsolesce content. How many times will everyone have to buy the "White Album" again?

Thank you for your consideration.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Shawn Moseley.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Once I have paid for the legal use of electronic and software access, or the mechanical use of a product, I should have the right to alter or repair it in any way I desire as long as it does not interfere with the rights of another.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, stephen gillikin.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Stephen Potter.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation by protecting the copyright holder from others copying their invention or idea. The protection is going too far. As an owner of various devices, electronics, digital media and machines, I should have the right to modify, change and alter these things as I see fit for my own personal use. I am not selling or seeking a profit (putting at risk the original creators profits), but making something work better for me. The manufacturer of something doesn't know me on a personal level and doesn't know EXACTLY what I want. They may get close and I buy their product knowing that I'm going to alter that product to fit my needs. If the act is illegal, then I am probably going to pass on the product (hurting the manufacturers profits) and find/make something else to meet my needs.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, stephen rogalla.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Vehicle owners have been repairing and tinkering with their own cars ever since they were first sold to the public. That the DMCA now makes that illegal--in the case of vehicle software modification--is an unintended consequence and is not reasonable. I should be able to repair or modify my own car legally.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Steven Beckerle.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

ON A PERSONAL NOTE: I would say it's difficult to imagine why the Copyright Office isn't making these reforms immediately, but I understand there are politics to consider. For instance, you have to make sure you keep your jobs by making the decisions the appointing politicians want you to make. You have to ensure those appointing politicians can shape the debate and use one-liners to keep the average American voter confused. And most importantly, you have to ensure those appointing politicians receive campaign contributions from the corporations interested in keeping the consumer in their pocket.

When you are staying up late at night worrying about the damage the DMCA does to the consumer, I just want you to know, I understand.

Thank you for your sacrifice.

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

The balance between protecting the rights of copyright holders and protecting the rights of property owners, consumers, and innovators has tipped towards copyright holders in the past decade. Restore the balance! Please consider the needs of consumers and future innovators as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Susan Parker.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles. And further still should have the right for the provider of their choice to repair or modify their own vehicle, if they so choose, and not be limited to the options provided by the manufacturer.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Szymon Sikora.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

By allowing consumers the right to more access of their devices, you would be cutting down on electronic trash. Our planet is in crises due, in large part, to the disposability of so many products.

Also, as a consumer, when I purchase a product, I assume that I can keep and use that product forever if I take care of it. If that isn't the case, manufacturers need to start giving us "expiration" dates so we can be aware if we are paying for a product that may change next year or if we can count on it working as intended for the next 5 years. This would definitely effect my purchasing choices.

Thank you for your consideration.

Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Thomas Dean.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

In our world today consumers are no longer in power. The companies producing products are driving consumers into what they feel is best or most profitable.

This kind of blatant disregard for the free will we have as humans is unacceptable. If companies provide cars or game consoles free of charge they should retain the right to control them and what we do with them.

Anything I purchase should be my decision what I do with it.

Thank you for your consideration.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, TJB.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

I am providing comments on behalf of myself, Tony Heupel.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

seriously, the fuck? i paid 30k for a car and you people are willing to shoot/jail/arrest/fine me not to touch its computer? Ú
Ú

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

I'm not saying stealing someone's work is ok just if i buy something outright i'd like to own it outright not kinda sorta lease it maybe. This sort of behavior stifles creativity and innovation.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Tony Williams.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

My 2002 Tahoe died, the body management computer quit working and therefore the security system quit working and locked out the fuel injectors. I took it to a local repair shop and they did not have the equipment to repair. I bought a used unit from a Junk yard and took it to the dealership. I was told the used unit could not be programmed. I requested the dealership to just do away with the alarm, I don't need the alarm for a 10+ year old car. The dealership said it was part of the system and could not be bypassed. I had to have my Tahoe towed to the dealership. GM did not have the part in stock. I had to wait 6 weeks and pay \$600 for something I did not want. Ú

Ú

Please make the information about the system available so I can repair myself. I have a University degree in Electrical Engineering and with proper documentation I think I could repair or bypass the system myself or at least contribute to an open source group to develop the tools to trouble shoot and repair the car I paid for. Why does the government make it illegal to repair my car and force me to take it back to the dealership for repairs.Ú

Ú

Please correct this injustice.Ú

Ú

Tony WilliamsÚ

People own the hardware so they should be able to install their own software/firmware on it. Locking everything down prevents people from letting their creativity shine. What ever happened to the pursuit of happiness? Running your own code or even open source or free programs hurts nobody. Look at linux. It's open and free. You can modify it all you want and share it.

My galaxy s5 is boggy because of all the bloat. There are pages of apps I don't ever use and don't want on my phone. I paid with my own hard earned money for the phone and I can't even run cyanogen mod or another open source rom because At&t locked the bootloader and refuses to provide the keys to unlock a device I rightfully own. It's at&t software that I don't want running on my device.

Tractors and cars now require you to pay ridiculous amounts of money to fix because you have to pay a service tech to fix it. The days of fixing your own devices and machinery are gone. Not being able to repair things yourself hurts people financially and malfunctions that you could have normally repaired yourself can even kill or seriously hurt you and others. People should have a choice on how they want to use the products that they purchased.

Thank you for your consideration.

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Vahong.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Walt Halstead.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.Ú

Right. I bought it, I should be able to fix it and modify it - using acceptable safety precautions. American history is full of examples of shade tree mechanics modifying, customizing, and otherwise altering stock vehicles, computers, gizmos, and just about any manufactured item. Just because it's now run by software doesn't mean we should stand 200 years of individual innovation on its head at the behest of a bunch of large corporations.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

I am providing comments on behalf of myself, Wayne Boerger.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

The Constitution says all people have the right to life liberty and property. It doesn't say "rich people's property", it says property. When I buy something, it becomes my property, not Apple's, nor any other company's - it is MINE to do with as I wish.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles. This is ridiculous, if I choose to modify my vehicle to better fit my needs and environment, I should be able to. The after market industry shouldn't be damaged because this....

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

If I buy a product and wish to modify it to fit my needs, environment, security, and/or profession - that's my right because I bought that product. I did. Other lease or rent it. It would be no different than Nike suing you because you cut the sleeves off a shirt you own by them.

Thank you for your consideration.

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, William Miller.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

If the focus of copyright law is only to constrain the way in which consumers can use the items they purchase, then it will cut off the oxygen to cultural organism that takes existing ideas, iterates on them and invents wholly new concepts. These concept have the potential to transform entire industries.

Please consider copyright law as an opportunity to empower the next generation of inventors - not a means to protect the corporate status quo.

Thank you for your consideration.

Most people would never suspect that repairing or tinkering with their own car or tractor could be illegal. These days, though, many manufacturers now put digital locks on the embedded software that operates our increasingly sophisticated, computer-controlled vehicles. Current law prohibits any person, including the vehicle's lawful owner, from tampering with those locks for any purpose. That's silly. Americans should have an unfettered right to repair and modify their own vehicles.

Copyright was designed to encourage creativity and fuel innovation. But it's being abused to do exactly the opposite. Every single day, copyright law is twisted to stifle creativity, limit consumer choice, dismantle property rights, and chip away at our digital freedoms. I should have the right to remix, modify, and repair the things that I own. As electronics are integrated into every kind of product, please consider the needs of consumers as well as rights holders.

Thank you for your consideration.

Short Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Item 1. Commenter Information

I am providing comments on behalf of myself, Zach cross.

Item 2. Proposed Class Addressed

Proposed Class 21: Vehicle software – diagnosis, repair, or modification

Item 3. Statement Regarding Proposed Exemption

If we're so earnest about being green, why can I not have every right to access and maintain my vehicle? Let me crack open the ECU and tune it for my environment, at altitude I have different fueling needs than the dummy map the factory gives us.

As a young, active, and politically-motivated individual, I thank you for your consideration. We appreciate you looking at consumer and citizen values in your policy building!
