Comment

Public Comment: There is a continuing need and justification for this exemption. As a member of the 3D printing community, this commenter agrees with this exemption. While 3D printers continue to use triply periodic minimal surfaces (TPMS) to limit the types of materials used in printers. There has been an expansion of third-party materials available for 3D printers due to the current exemption and new materials will continue to be used for 3D printing by artists and engineers who use materials for unconventional use. This is the nature of artistic endeavors or the creation of new engineering structures, to expand an aesthetic and self-expression. As new materials are invented or older materials are repurposed, artists and engineers should be free to experiment in the creative process. I agree with the renewal petition and the conditions that led to the exemption will continue during the next triennial period.
