

I use apps from the jailbreak on my Iphone and Ipad that Apple will not put on Itunes but are effective applications that I use.

I use videos from YouTube in my work that will not play because Apple doesn't allow them to play without a 3G or Wifi connection. Neither of those are available many times when I need to show a video. Cydia of Jailbreak offers an app that will allow Youtube to think 3g is available and play the YouTube video.

I would lose this teaching and selling capacity without the jailbreak of either or both devices.
