

Long Comment Regarding a Proposed Exemption Under 17 U.S.C. 1201

Check here if multimedia evidence is being provided in connection with this comment

Please note that such evidence must be separately submitted on a disc or flash drive. See the Notice of Proposed Rulemaking for detailed instructions.

Item 1. Commenter Information

Identify the commenting party and, if desired, provide a means for others to contact the commenter or an authorized representative of the commenter by email and/or telephone. (Please keep in mind that any private, confidential, or personally identifiable information in this document will be accessible to the public.)

Commenting Party: Competitive Carriers Association (“CCA”)

CCA is the nation’s leading association for competitive wireless providers and stakeholders across the United States. CCA’s membership includes more than 100 competitive wireless providers ranging from small, rural carriers serving fewer than 5,000 customers to regional and national providers serving millions of customers. The licensed service area of CCA’s carrier members covers more than 95 percent of the nation. CCA also represents approximately 200 associate members consisting of small businesses, vendors, and suppliers that serve carriers of all sizes.

Item 2. Proposed Class Addressed

Identify the proposed exemption that your comment addresses by the number and name of the class set forth in the Notice of Proposed Rulemaking (e.g., “Proposed Class 7: Audiovisual works – derivative uses – noncommercial remix videos”).

Proposed Class 15: Unlocking—Consumer Machines.¹ As noted in the *NPRM*, these devices allow encompass “the Internet of Things . . . which would encompass a diverse range of

¹ CCA originally sought four separate exemptions addressing the following categories: (i) wireless handsets; (ii) all-purpose tablet computers; (iii) mobile hotspots and MiFi devices; and (iv) connected wearables and consumer machines (the Internet of Things). For consistency and efficiency, however, CCA reiterates its request that these exemptions, and other similar exemptions, should be consolidated into a single “wireless device” exemption, as they all involve computer programs used in devices that connect to a telecommunications and/or broadband network. Consumers do not distinguish among categories of connected devices, and having an exemption only applicable to a subset of wireless devices is likely to cause consumer confusion and frustration.

devices and equipment.”² The Internet of Things should be defined, for the purposes of this proceeding, as “any ‘smart’ device that utilizes a data connection to connect to the Internet or to interact with other ‘smart’ devices.” Only if defined broadly will this exemption cover the true scope of Internet of Things devices. For simplicity, these devices will be referred to throughout these comments as “consumer machines.”

CCA has proposed the following exemption for Proposed Class 15:³

Computer programs, in the form of firmware or software, or data used by firmware or software, that enables . . . consumer machines to connect to a wireless network that offers telecommunications and/or information services, when circumvention is initiated by the owner of the device, or by another person at the direction of the owner of the device, in order to connect to a wireless network that offers telecommunications and/or information services, and access to the network is authorized by the operator of the network.

CCA believes that this exemption properly enables users to take control over the use of their consumer machines, and permits them the choice of which network they will be connected to. Rather than relying on the presumed goodwill of wireless carriers and the availability of unlocking codes from manufacturers, with this exemption consumers will be empowered to retain their current consumer machines when selecting the wireless service provider of their choice.

Given the growing importance of data as a form of wireless communication among consumers, CCA believes that the most appropriate exemption language is for devices that connect to “telecommunications and/or information services.” At present, very few wireless providers offer significant numbers of voice-only plans, and the ever-increasing demand by consumers for data weighs in favor of the Copyright Office clarifying the exemption in this proceeding to confirm that consumers have right to unlock their devices for the purpose of connecting to wireless networks for both telecommunications and information service uses.

Item 3. Overview

Provide a brief summary of the circumvention activity sought to be exempted or opposed and why.

CCA proposes to circumvent software or firmware locks on a consumer machine that prevent the consumer machine from accessing the wireless network of the owner’s choosing.

The exemption is being sought because consumer machine owners have a clear ownership interest in the consumer machine itself, as well as the underlying operating system software, and should be afforded the ability to make non-infringing uses of these products.

² *Exemption to Prohibition of Circumvention of Copyright Protection Systems for Access Control Technologies*, Notice of Proposed Rulemaking, Docket No. 2014-07, 79 FR 73856, 73866 (Dec. 12, 2014) (“*NPRM*”).

³ *NPRM* at 73866, fn. 55; *see also* CCA Consumer Machines Unlocking Pet. at 1-2.

Absent an exemption, consumer machine owners may be forced to purchase replacement machines in order to change service providers and connect to the wireless network of their choice. This may result in substantial and unnecessary costs to the consumer.

CCA's proposed exemption is not only consistent with the Copyright Office's mandate to allow circumvention where the public interest is served by permitting non-infringing use of the copyrighted material, but also will promote competition and consumer choice in an increasingly consolidated wireless industry.⁴

Item 4. Technological Protection Measure(s) and Method(s) of Circumvention

Describe the TPM(s) that control access to the work and the relevant method(s) of circumvention. The description should provide sufficient information to allow the Office to understand the nature of the relevant technologies, as well as how they are disabled or bypassed.

The Copyright Office seeks information regarding the “extent to which devices understood to be in this class use mobile telecommunications or data networks (e.g., HSPA+ or LTE networks) for wireless connections, rather than Wi-Fi or Bluetooth, or some other technology, and whether parties are seeking to circumvent access controls on devices that use such other technologies.”⁵

With regards to the first question, many consumer machines and machine-to-machine (M2M) communications already use integrated mobile telecommunications and/or data networks. For example, Verizon boasts that its “Smart Cities solutions are built on the largest 4G LTE network in the nation and our portfolio of technology solutions.”⁶ In a clear indication that such devices are intended to be firmly controlled by the wireless provider, Verizon notes that it has “built a *tightly integrated* ecosystem of M2M and wireless network technologies that allow you to create a smarter city.”⁷ Similarly, in a discussion of connected machines, AT&T offers customers the ability to “[d]eploy and control connected devices easily and quickly using a

⁴ The Federal Communications Commission's recently-released *Seventeenth Report* on mobile wireless competition found that the Herfindahl-Hirschman Index (“HHI”), a measure of market concentration, averaged 3,027 across the country—more than 20% above the level at which a market is considered “highly concentrated.” The HHI numbers for the wireless industry have consistently been on the rise over the last five years or more. *See Annual Report and Analysis of Competitive Market Conditions With Respect to Mobile Wireless, Including Commercial Mobile Services*, Seventeenth Report, WT Docket No. 13-135, DA 14-1862, ¶¶ 32-33 (rel. Dec. 18, 2014).

⁵ *NPRM* at 73866.

⁶ Verizon Smart Cities Factsheet, p. 2, available at http://www.verizonenterprise.com/resources/factsheets/fs_verizon-smart-cities-solutions_en_xg.pdf.

⁷ *Id.* (emphasis added).

single, global SIM that automatically and remotely connects to the network”⁸ – certainly not language that suggests the ability to move your connected machines among different providers. AT&T similar extols the virtue of a customer’s M2M platform having a “[r]elationship with a single global carrier.”⁹

Given what is already occurring in the Internet of Things space, it is probably that “in the next three years [consumer machines will be] adversely affected by the prohibition on circumvention”¹⁰ of software locks on such devices.

Consumer machines could be hardware or software-locked using a variety of methods, including service provider code locking, system operator code locking, band order locking and Subscriber Identity Module locking or Universal Integrated Circuit Card locking. These locking mechanisms would bind the device to specific wireless networks and prevent consumers from accessing the wireless network of their choice. Only by circumventing these various TPMs could a consumer machine owner transfer the use of the consumer machine to a network and provider of one’s choosing.

Consumer machines would be unlocked using a variety of methods currently used to unlock other devices, typically by changing the variables in certain memory locations and updating the preferred roaming list (“PRL”) to make the consumer machine compatible with a new network. These variables would effectively be a “blank slate” when the consumer machine comes off the assembly line, and then updated to make them compatible with the network with which the consumer machine is intended to be used. Thus, these variables are and would be intended by the copyright owner to be changed based on which network a particular consumer machine will be connected to. In this respect, no unusual or unexpected alterations are being made to the underlying operating system code – instead, anticipated changes are being made that will permit the consumer machine to operate.

Item 5. Asserted Noninfringing Use(s)

Explain the asserted noninfringing use(s) of copyrighted works said to be facilitated by the proposed exemption, including all legal (statutory or doctrinal) bases for the claim that the uses are or are likely noninfringing. Commenters should provide an evidentiary basis to support their contentions, including discussion or refutation of specific examples of such uses and, if available, documentary and/or separately submitted multimedia evidence.

Consumers who unlock consumer machines may engage in one or more of several noninfringing uses of the copyrighted software or firmware that resides on their consumer machine and permits it to connect to networks. Typically, the circumvention of the TPM allows an owner, who has fulfilled all obligations to the original provider, to operate the device on the

⁸ AT&T Global SIM fact sheet, *available at* <http://www.business.att.com/enterprise/Service/mobility-services/machine-to-machine/global-sim/>.

⁹ *Id.*

¹⁰ *NPRM* at 73857.

network of a new, compatible wireless provider of one's choosing. Noninfringing use of these copyrighted works is supported under multiple legal theories, three of which are explained here.

Unlocking Constitutes "Fair Use" Under 17 U.S.C. Section 107

Consumer machine unlocking constitutes "fair use" under Section 107 of Title 17 of the United States Code. When most consumer machines are unlocked, the device owner is simply changing the variables in certain memory locations and updating the PRL to make the consumer machine useable on the new network. Carriers regularly update the PRL on their customers' consumer machines, so the original author of the copyrighted work intended these variables to be changed without constituting a copyright violation. Further, unlocking a consumer machine meets all four factors of the "fair use" test set forth in Section 107: (1) the purpose of the use is to allow the lawful owner of the consumer machine to connect to a wireless network of their choice, a reasonable and noninfringing use; (2) the copyrighted work is intended to be changed in this manner and is necessary for the consumer machine owner to derive any continued value from the copyrighted work; (3) the amount of the code used in an altered state is extremely small compared to the consumer machine operating system as a whole; and (4) the market for and value of the copyrighted work actually increases, as it allows the consumer machine to be transferred on the secondary market more easily and to a broader array of buyers.

Unlocking a Consumer Machine Does Not Create an Infringing Derivative Work

Unlocking a consumer machine does not create an infringing "derivative work." This is because, in most instances, unlocking a consumer machine does not change the underlying consumer machine software, but rather it merely changes underlying variables accessed by the program. As discussed above, these variables are intended by the software designer to be changed, and their change, therefore, does not create an infringing derivative work. Instead, the software is merely being operated by the consumer machine owners as intended.

Any Derivative Work Created is Protected Under 17 U.S.C. Section 117(a)(1)

If, however, a derivative work is, in fact, created, it falls within the exception set forth in 17 U.S.C. Section 117(a)(1). This subsection states that a derivative work may be created by the owner of a copyrighted work if the "new copy or adaptation is created as an essential step in the utilization of the computer program in conjunction with a machine and that it is used in no other manner." Since the changes being made to the copyright work are the same ones that need to be made by the underlying carrier in order for the consumer machine to operate properly on its wireless network, such adaptations are inherently "essential step[s] in the utilization of the computer program in conjunction with [the device]." Indeed, in 2012, the Register agreed that unlocking was an "essential step" in the utilization of the device, finding again that "[m]odifications to the firmware or software on the [device] may be necessary to make the device functional with another service and better serve the legitimate needs of the consumer."¹¹

¹¹ 2012 Recommendation at 93.

Relevant Case Law Demonstrates That Consumer Machine Owners are Owners of the Underlying Operating System Software for Section 117(a)(1) Exemption Purposes

In order to fall within the exception set forth in 17 U.S.C. Section 117(a)(1), the party creating the derivative work must also be the owner of the software – that is, if a device owner is a mere licensee of the software, Section 117(a)(1) protections are unavailable to him or her.¹² Although the Supreme Court has not articulated a national framework on this issue, the two leading cases on licensing vs. ownership are *Krause v. Titleserv, Inc.* 402 F.3d 119 (2d Cir. 2005) and *Vernor v. Autodesk, Inc.*, 621 F.3d 1102 (9th Cir. 2010). In the 2012 *Recommendation*, the Register concluded that the state of the law was sufficiently unclear as to make it impossible to determine whether all device owners were licensees or owners of the software.¹³ Despite this determination, the current state of the market and the terms on which much of the operating system software is provided to consumers in connection with a consumer machine purchase make it clear that consumer machine owners are the also the owners of the operating system software under either the *Krause* or the *Vernor* tests.

In *Krause*, the Second Circuit held that ownership of a copyrighted work, as opposed to license, is indicated by balancing seven factors:

(1) whether substantial consideration was paid for the copy; (2) whether the copy was created for the sole benefit of the purchaser; (3) whether the copy was customized to serve the purchaser’s use; (4) whether the copy was stored on property owned by the purchaser; (5) whether the creator reserved the right to repossess the copy; (6) whether the creator agreed that the purchaser had the right to possess and use the programs forever regardless of whether the relationship between the parties terminated; and (7) whether the purchaser was free to discard or destroy the copy anytime it wished.¹⁴

With respect to consumer machines, consumer machine owners pay substantial consideration for the copy of the software as part of the consumer machine price. The copy of the software is stored on property owned, namely the physical consumer machine, and the software creator permits the underlying operating system software to be used by the consumer machine owner indefinitely (and in some cases, even longer due to transfer rights). Further, the consumer machine owner is free to discard or destroy the copy (along with the physical consumer machine) anytime that he or she wishes. On balance, these *Krause* factors strongly

¹² Contrary to the arguments raised by CTIA in the 2012 proceeding, simply stating that a piece of software is being provided under “license” does not make it so. See *Vernor v. Autodesk, Inc.*, 621 F.3d 1102, 1180 (9th Cir. 2010) (holding that simply labeling a software agreement as a license is not “dispositive”).

¹³ 2012 *Recommendation* at 92 (“The Register concludes that the state of the law remains unclear. Although *Vernor* and *Krause* are useful guideposts in considering the status of software ownership, they are controlling precedent in only two circuits and are inconsistent in their approach; whether and how those standards would be applied in other circuits is unknown.”)

¹⁴ *Krause*, 402 F.3d at 124.

favor a finding of ownership of the copyrighted operating system software by the wireless device owner.

In *Vernor*, the Ninth Circuit held that “a software user is a licensee rather than an owner of a copy where the copyright owner (1) specifies that the user is granted a license; (2) significantly restricts the user’s ability to transfer the software; and (3) imposes notable use restrictions.”¹⁵ These factors can be seen as more stringent, and it has been argued by some that they favor the view that the device owner is a licensee. Nevertheless, the test for ownership of a consumer machine’s underlying operating system is met under the *Vernor* test as well. Importantly, the *Vernor* test is a conjunctive test, and therefore demands that all three elements be met if a software user is to be considered a licensee, rather than an owner.¹⁶

As applied to the facts at hand, consumer machines do not have “notable use restrictions.” Customers are permitted to use their consumer machines for any lawful purpose, and as the Register stated in the *2012 Recommendation*, “no wireless provider has taken the position that customers are unable to sell devices that they no longer use, or transfer them to a spouse, child or friend.”¹⁷ Accordingly, consumer machine operating system software fails one element of the *Vernor* test, and on this basis alone a court could conclude that an owner of a consumer machine is also an owner of the copy of the operating system software.

Given the evidence above, it is clear that consumer machine owners should be considered owners of a copy of the operating system software, and therefore entitled to the protections of Section 117(a)(1), and be permitted to create a derivative work in order to allow the consumer machine to connect to a wireless network of the consumer machine owners choice.

Item 6. Asserted Adverse Effects

Explain whether the inability to circumvent the TPM(s) at issue has or is likely to have adverse effects on the asserted noninfringing use(s), including any relevant legal (statutory or doctrinal) considerations. Commenters should also address any potential alternatives that permit the asserted noninfringing use(s) without the need for circumvention. Commenters should provide an evidentiary basis to support their contentions, including discussion or refutation of specific examples of such uses and, if available, documentary and/or separately submitted multimedia evidence.

The most clear, and most immediate, adverse effect that the TPMs that lock consumer machines have is to prevent consumers from easily switching their consumer machines to the competing network of their choice. Although carriers may unlock under certain circumstances, owners should not be beholden to the carrier after completion of service agreement commitments. As the Senate has noted, there are also “circumstances in which additional

¹⁵ *Vernor*, 621 F.3d at 1111.

¹⁶ See YULE KIM, CONGRESSIONAL RESEARCH SERVICE, STATUTORY INTERPRETATION: GENERAL PRINCIPLES AND RECENT TRENDS, Order Code 97-589 at 8 (updated Aug. 31, 2008) (“Ordinarily, as in everyday English, use of the conjunctive ‘and’ in a list means that all of the listed requirements must be satisfied . . .”).

¹⁷ *2012 Recommendation* at 92 (quoting MetroPCS Comments at 17).

avenues for unlocking may be preferable over attempting to unlock through the carrier.”¹⁸ Absent an exemption, TPMs used to lock consumer machines to a particular network will foreclose the ability to exercise preferable, and in some cases, the only, avenues to unlock devices. Since circumvention to connect to an alternative network would be a noninfringing use of the copyrighted work, consumers should have the freedom to unlock their consumer machines on their own or through an agent of their choosing.

Consumer Machines are Not Subject to the Current CTIA “Voluntary” Unlocking Agreement, and Individual Carrier Policies are Insufficient to Protect Consumer Interests

As discussed above, it is likely that wireless providers already are asserting proprietary control over consumer machines and will increasingly do so during the exemption period. AT&T, one of the largest wireless carriers in the nation, makes their locking policy for all devices clear, stating that the company “locks all devices, as of November 11, 2004.”¹⁹

Critically, the CTIA “voluntary” agreement currently in place to unlock certain wireless devices does not include consumer machines, but instead only “phones and tablets . . . that are locked by or at the direction of the carrier.”²⁰ While carriers may provide unlock codes at their own discretion, there is presently nothing preventing them from refusing to unlock these important devices. This lack of commitment presents a significant problem for consumers.

Even if a carrier were to have a “voluntary” unlocking policy for consumer machines, the exemption would remain necessary. As NTIA noted in the last triennial review, and the voluntary agreement confirms, oftentimes carriers must have the necessary code or the ability to reasonably obtain it to unlock the device.²¹ Where a voluntary agreement only requires that a carrier “initiate a request to the [original equipment manufacturer (“OEM”)] to unlock the eligible device” it is possible for the carrier to comply with the agreement in a manner that does not ultimately result in the consumer’s device being unlocked.

This also highlights the fact that OEMs (or third-party software developers) often consider themselves to be the owners of the copyrighted software, which is provided under a purported license to carriers. So, there remains the possibility an OEM or software developer may refuse to allow carriers to alter their software in any respect, which would eliminate the ability of carriers to implement their voluntary unlocking promises. In such a circumstance, a

¹⁸ Senate Report 113-212, available at <http://www.gpo.gov/fdsys/pkg/CRPT-113srpt212/html/CRPT-113srpt212.htm>.

¹⁹ See <http://www.att.com/media/att/2014/support/pdf/ATTMobilityDeviceUnlockCodeInstructions.pdf>

²⁰ CTIA Consumer Code for Wireless Service, Section 12, available at <http://www.ctia.org/policy-initiatives/voluntary-guidelines/consumer-code-for-wireless-service>.

²¹ NTIA Reply Comments at 16, available at http://www.copyright.gov/1201/2012/2012_NTIA_Letter.pdf; CTIA Consumer Code of Conduct § 12.

consumer unlocking exemption granted in this proceeding would be the only path to allowing customers to switch wireless providers with their devices in hand. And, this circumstance is not farfetched or theoretical. Indeed, in a recent discussion of the company's post-sale transition plan, Cincinnati Bell Wireless ("CBW") stated that it would only be allowing customers to unlock their handsets to move to another carrier if the handsets were "one year old or newer."²² Even with this significant restriction, CBW would only permit customers to "transition to another provider by providing unlock codes (*if available*)," suggesting that there are a sufficient number of circumstances in which unlock codes are not available to warrant a specific disclosure.²³ Although this was in the context of wireless handsets, it is not a significant leap to assume that the same is or would be the case for similarly-situated consumer machine customers.

Thus there is clear evidence that voluntary unlocking policies do not obviate the need for an exemption. As a result, customers must have the option and the right to unlock their consumer machines in order to realize their full utility, and without unwarranted interference from their original wireless provider.

Substantial Evidence of Likely Adverse Effects Exists, and Consumers Have No Reasonable Alternatives to Circumvention

The Internet of Things, which includes devices such as wearable consumer products, appliances, in-home connected devices and smart meters, represents the next step in the evolution of the Internet by allowing objects to communicate with other objects. A recent Senate letter estimated that the Internet of Things is expected "to generate global revenues of \$8.9 trillion – with over 200 billion connected objects – by 2020."²⁴ Congress has shown a great interest in this new category of connected devices, forming a congressional caucus on the Internet of Things. Representative Darrell Issa stated, "It's critical that lawmakers remain educated about the fast-paced evolution of the Internet of Things, and have informed policy discussions about the government's role in access and use of these devices" and has pledged to "ensure federal policy spurs, rather than stifles, our innovation economy."²⁵

After the previous unlocking exemption was allowed to expire, Congress saw sufficient current adverse effects, as well as the potential for adverse effects, to immediately reinstate and expand the exemption in the "Unlocking Consumer Choice and Wireless Competition Act." Even with other voluntary unlocking policies in place, Congress saw sufficient harm in the

²³ *Id.* (emphasis added).

²⁴ Letter dated October 20, 2014 from Deb Fischer, Cory A. Booker, Kelly Ayotte and Brian Schatz, U.S. Senators to The Honorable Jay Rockefeller, Chairman, U.S. Senate Committee on Commerce, Science & Transportation and The Honorable John Thune, Ranking Member, U.S. Senate Committee on Commerce, Science & Transportation, at 1.

²⁵ Erin Mershon, "Issa, DelBene for Internet of Things caucus," POLITICO (Jan. 13, 2015), available at <https://www.politicopro.com/tech/whiteboard/?wbid=46507>.

marketplace to adopt legislation. And, in this respect, Congress was performing the will of the people. A White House petition garnered more than 114,000 signatures from concerned consumers who demonstrated the likely adverse effects of the rejection of the unlocking exemption.²⁶ Indeed, this consumer outcry extended not only to the original exemption or wireless handsets, but also to other wireless devices as well. As part of the “Unlocking Consumer Choice and Wireless Competition Act,” Congress directed the Copyright Office to expand its inquiry into other wireless devices, such as consumer machines, to ensure that anti-competitive locking policies were not harming the market for these important consumer products as well. Even with voluntary unlocking policies for handsets and tablets already in place, Congress saw sufficient harm in the marketplace to adopt legislation directing the Copyright Office to undertake this new examination.

Additionally, NTIA petitioned the FCC to commence a rulemaking to require carriers to unlock devices upon request.²⁷ NTIA stated that a rule would “increase competition in the mobile service market and enhance consumer welfare.”²⁸ While the enactment of the Unlocking Consumer Choice and Wireless Competition Act foreclosed the need for rulemaking, not extending an exemption would have the adverse effects of decreased competition and consumer welfare.

CCA is not aware of any on viable alternatives to potential locks on consumer machines the horizon. As a result, the Copyright Office remains consumers’ best hope for a continued ability to lawfully unlock their consumer machines. The Copyright Office should heed the outcry from consumers, Congress and the Administration about the current and potential anti-consumer harms that failing to adopt a consumer machine unlocking exemption would bring, and adopt CCA’s proposed exemption.

Item 7. Statutory Factors

Evaluate the proposed exemption in light of each of the statutory factors set forth in 17 U.S.C. 1201(a)(1)(C):

- (i) *the availability for use of copyrighted works;*

Without question locks on consumer machines would reduce the availability for use and usability of the copyrighted software operating system. A customer who would otherwise be technically able to use his or her device on a competing network is prevented from doing so by artificial locks. Thus, the ability to use the copyrighted operating system software that powers the consumer machine is substantially limited; if a customer switches networks and has a

²⁶ See R. David Edelman, “It’s Time to Legalize Cell Phone Unlocking,” Official White House Response to Make Unlocking Cell Phones Legal, *available at* <https://petitions.whitehouse.gov/response/its-time-legalize-cell-phone-unlocking>.

²⁷ NTIA, Petition for Rulemaking of the National Telecommunications and Information Administration (filed Sept. 17, 2013), *available at* http://www.ntia.doc.gov/files/ntia/publications/ntia_mobile_devices_unlocking_petition_09172013.pdf.

²⁸ *Id.* at 1.

consumer machine that cannot be unlocked, he or she is no longer able to use the copyrighted operating system.

Importantly, as the Register found during the prior proceeding:

There is no indication that mobile . . . firmware is sold in any way other than with the [device] for which it is developed, and no indication that there are alternative “formats” available that would not require circumvention – that is, there is no evidence that users of locked legacy [devices] can simply install an alternative operating system that does not include carrier locks. Accordingly, the first factor favors an exemption.²⁹

These facts remain as true today as they did in 2012. CCA is unaware of consumer machine firmware being sold in any other way than bundled with the consumer machine for which it was developed, and is aware of no other formats of such operating system software available that would not require circumvention. As such, the Register should make the same finding in this proceeding that the first statutory factor favors an exemption.

(ii) *the availability for use of works for nonprofit archival, preservation, and educational purposes;*

An exemption permitting the unlocking of consumer machines increases the availability of the copyrighted operating system works for use for nonprofit archival, preservation, and educational purposes. As an initial matter, a significant number of nonprofit organizations fund their operations through the collection, unlocking and resale of wireless devices. In addition, artificial locks on consumer machine software may prevent those operating systems from being studied in the classroom or archived for future study. An exemption to the prohibition on circumvention of consumer machine locks certainly will not negatively impact, and may in fact promote, the use of these works for such purposes.

(iii) *the impact that the prohibition on the circumvention of technological measures applied to copyrighted works has on criticism, comment, news reporting, teaching, scholarship, or research;*

Similar to the use of the works for nonprofit and educational purposes, there should be no concern that a consumer machine unlocking exemption will have any negative impact on criticism, comment, news reporting, teaching, scholarship or research. In fact, there may be positive benefits for these fields that flow from an unlocking exemption. For example, journalists can improve consumer awareness by writing about the behavior of an unlocked devices moving from one network to another. Similarly, this would allow industry commenters to review the performance of a single consumer machine on multiple wireless networks.

(iv) *the effect of circumvention of technological measures on the market for or value of copyrighted works; and*

If anything, the circumvention of consumer machine locks actually *improves* the market value of the copyrighted work. Since the operating system conveys with the wireless device, the

²⁹ 2012 Recommendation at 97.

creator of the copyrighted work is actually benefited by being able to reach the widest possible audience. If a consumer machine is locked to a particular network, it inherently has a smaller base of customers on the secondary market, and is therefore worth less to the original purchaser. The operating system is a large part of the value of the fully operational consumer machine, and customers will be willing to pay more for a consumer machine (and the underlying operating system) that is worth more, and can be transferred more easily, on the secondary market.

Although the Register found that the market for mobile device operating system software was “unlikely to be affected by enabling consumers to alter that software for the purpose of using the handset on another carrier,” this was coupled with the finding that “[t]here is nothing in the record to suggest that the market for firmware has declined in the six years following the first granting of an unlocking exemption.”³⁰ CCA agrees with the Register’s prior determination. In fact, the market for firmware (and the consumer machines with which it is sold) has only increased since the Register made that determination in 2012. A recent CTIA survey cited by the Federal Communications Commission found that “the number of connections grew . . . from 326.5 million at the end of 2012, to 335.7 million at the end of 2013 [or 3 percent].”³¹ Thus, it can be demonstrated that the market for firmware (and the wireless devices with which it is sold) has only increased since the Register made the determination in 2012. Accordingly, the Register should again draw the same conclusion, based on the same or stronger current evidence, that “the fourth factor . . . favors an exemption.”³²

- (v) *any other factor that may be appropriate for the Librarian to consider in evaluating the proposed exemption.*

The Librarian should consider the positive impact that an unlocking exemption will have on consumer choice and competition in the wireless industry. By allowing customers to have control over their own wireless devices, and to put them on the network of their choosing, the Librarian is conferring a significant social benefit. The Librarian should empower consumers to make informed choices about wireless services.

Item 8. Documentary Evidence

Commenters are encouraged to submit documentary evidence to support their arguments or illustrate pertinent points concerning the proposed exemption. Any such documentary evidence should be attached to the comment and uploaded through the Office’s website (though it does not count toward the 25-page limit).

None submitted.
