Copyright Office says it is developing a strategy for modernizing and improving recordation services via comprehensive reengineering.

The Federal Register notice describing the final rule **to Streamline Its Recordation Practices**, effective October 17, 2014, is available at www.copyright.gov/rulemaking/recordation-practices.

Kneel and pray. Where were the contributors after the Marakesh Treaty was signed when the WIPO rep practically salivated at being asked about Fraud in their adaptation of online filings as the "way to be."

Online filings have removed the Gospel of investigations, paper trails. Online actors come and go without being observed. Ask the RBC client who ten years later found out accounts were hacked by a JP Morgan employee, outed only because RBC provided their client with an Encrypted CD the firm had knowingly withheld leading up to, during, even post a FINRA arbitration. Ask ICANN about Fraudulent certificates it copped to a few short months after ICANN's CEO testified to Congress, the House Judiciary, that IANA would be secure under ICANN. Not.

The Register of Copyrights where never know with online filings if the party submitting documents is the Real Deal or a Bad Actor from .ru, .ir or around the corner, masquerading as the Owner of the Copyright. C'mon. In a world where TOR admits its Underground Railroad funded by State conscripts people's ISP's and identity to use in taunting foreign politics and governments, what is the magic elixir the Register of Copyrights has but isn't sharing.

Electronic formats and filings, in all areas, are plagued with fraud- fraudulent certificates, fraudulent requests, fraudulent people, you know, computers algorithm programmed to be you and me, allegedly so smart Watson won on jeopardy, allegedly so smart they beat Jeff Foxworthy's 5th grader challenge. Nope. One and only way to mitigate fraud is to keep a hard copy component, which, as a side boost would keep DC replete with tourists and the US Post Office in business.

Its not an if but a when, the LOC, Library of Records, will be hacked, if it hasn't already just not admitted to, publicly.

The Federal Register notice of new fees for correction procedures, \$7 per corrected title, is part and parcel of this concern. Ask WIPO. The WIPO examiner at the USPTO Academy will tell you his empathy costs government and systems dollars, acknowledging he feels so bad hearing people learn the "invoice" they paid for renewal, etc, did not go to WIPO. No one

knows where the payment went. WIPO knows the cost. People need to pay twice. Except, he whispered, he feels so badly of this fraud, he, at times, lets the traumatized party off paying WIPO.

Welcome to the world of E-payment fraud, it seems only the Register of Congress gets no whiff of in her DC bubble. Ummm, the obvious step in deterrent is requiring Driver Licenses or government ID's to be produced but yeah, that would be like giving away the placenta for free after the baby is born.

Oh yeah, placentas get trashed unless someone finds a way to make it into gold as jewelry or a health drink..... c'mon. Be serious. NO!!!!!!
